Conforto
Well-being
to transform

Since 1985, Conforto has been dedicated to produce personal protective equipment, prioritizing the quality, safety and comfort for the workers.

The company is located in Estância Velha/RS (in Brazil), a privileged area due to the complete infrastructure in footwear leather segment, which makes the logistics manufacturing and product distribution possible.

With a focus on personal protective equipment, we are constantly being updated, investing in the development of our products in order to increasingly reach the needs of

our customers, combining safety, comfort and quality.

Inside this concept, the company has its own qualified laboratory, where it performs daily testing of raw materials and finished products, ensuring the quality from the beginning to the end of the manufacture of its products.

The QR Code will direct you to the page on our website, where you will find the technical manuals of the products present in our catalog

Social Responsibility

Our company encourages and invests in the qualification of its employees through courses, lectures and management projects and prioritizes the well-being of the community in which it is inserted.

Sustainable development

The respect for the environment is inserted in the equipments the company brings to the market and also in daily actions of our operational process.

Technological Innovation

We are a company focused on the future and with constant investments in research and technology that result in the manufacture of high-quality products, suitable for the reality of each client.

Guaranteed delivery

To ensure the delivery of your order on the scheduled date, we have to guarantee daily production, even in the absence of electrical energy.

Quality Laboratory

Conforto has its own laboratory where it performs daily tests on all their raw materials and products: resistance to bending and hydrolysis of the sole, perforation of insoles, impact of toe caps, abrasion resistance and temperature passage, and many others.

Reliability

Each product is delivered in a customized packaging, where there are instructions for the use, conservation and storage, in addition to having a barcode for tracking the manufacturing process until the delivery of the product to our customer. It is the reliability of the accurate product in your company.

Solution for multiple

segments

Conforto has the right solution for each type of activity. Therefore, we identify our products in this catalogue with icons that will guide you in choosing the perfect product, according to the needs of your company.

SHOES

Extremely comfortable and durable, our shoes offer what you need for all situations. Check below the icons of each line and the suggestion of use in the products:

CASUAL

Comfort, protection and safety without giving up style. Thus, the casual line counts with resistant and elegant shoes, suitable for face daily life in differentiated environments.

INDUSTRY AND SERVICES

Footwear line designed for industry and other services that require resistance without giving up comfort, providing convenience and protection to the user.

ELECTRIC

To ensure comfort and safety of professionals who work in areas that are influenced by electricity, Conforto invests in several products which are specific for the workers protection.

FOREST

Comfortable and very resistant shoes, which are designed to protect the professionals exposed to the most varied natural environments, preventing accidents like scratches, drillings and cuts.

WHITE

Created to serve health and food areas and other activities which require comfort, hygiene and protection, the white line has quality and lightweight shoes that add benefits such as cleaning and uniformity.

MOTORCYCLE

Ensuring more comfort and safety for professionals who face the dangers of daily traffic, the motorcycle line offers comfortable and resistant footwear to provide more protection to motorcyclists.

GLOVES

Comfort, malleability, skill and resistance are the features of our gloves. In addition, each model offers a specific type of protection, identified with the icons below:

Mechanical Risks

Thermal Risks (Cold)

Thermal Risks (Heat)

gloves

L21V61

VACHETTA GLOVES

Protective glove, oil model, made in vachetta full grain leather, 8/10 thickness, with inner reinforcement on palm and inner reinforcement strap between the thumb and index finger. It has adjustment elastic on the back. The wrist finishing is in viés material. Indicated for the hands protection in general services which present mechanical risks where there is contact with abrasive materials and/or excoriating agents.

L21Y61

VACHETTA GLOVES WITH CANVAS

Protective gloves, oil model, with vachetta palm, 8/10 thickness and vinyl canvas back, with inner reinforcement on palm and inner reinforcement strap between the thumb and index finger. It has adjustment elastic on the back. Indicated for the hands protection in general services which present mechanical risks where there is contact with abrasive materials and/or excoriating agents.

L14V62

RAPPEL GLOVES

Protective gloves, rappel model, made in vachetta full grain leather, 8/10 thickness and external reinforcement especially in palm stitched with aramid thread. It has adjustment elastic on the back. Wrist finishing viés. These gloves are indicated for hands protection in general services that present mechanical risks, especially friction on the palm of the hand, and where there is contact with abrasive materials and/or excoriating agents.

L28V62

FIREMAN GLOVES REMOVAL

Protection gloves, fireman model, made in vachetta full grain leather, 8/10 thickness with inner reinforcement especially in palm and padded back. There is velcro for the wrist adjustment. Indicated for hands protection in general services that present mechanical risks and where there is contact with abrasive materials and/or excoriating agents, especially for firefighters - removal

L33Y60 DRIVER GLOVES

Protective driver model gloves, made of vachetta full grain leather with details in mesh, full 8/10 thickness, with cut off fingers in the first phalanx. There is velcro for the wrist adjustment and the Wrist finishing viés. Indicated for hands protection in general services against mechanical risks where there is contact with abrasive materials and/or excoriating agents, and the necessity of fingertips touching.

L20VM75 COLD STORE GLOVES

Protective cold store model gloves made of vachetta 8/10 thickness, coated with polyester fiber blanket. Wrist in mesh. Indicated for hands protection in general services against mechanical risks in places of low temperature as cold chambers and where there is contact with abrasive materials and/or excoriating agents.

L22V60 INSTRUMENTALIST GLOVE I

Protective instrumentalist I glove made in vachetta full grain leather and 5/7 thickness. It has adjustment elastic on the back. Viés wrist finish. Indicated for hands protection in general services than present mechanical risks and where there is contact with abrasive materials and/or excoriating agents, and the necessity of fingertips touching.

OPTIONALS: Wrist adjustment with velcro.

LS2760 MICROFIBER GLOVES

Protective glove made of special microfiber, with inner reinforcement strap between the thumb and index finger. It has elastic adjustment on the back. Wrist finishing viés. It is indicated for hands protection in general services than present mechanical risks and where there is contact with abrasive materials and/or excoriating agents.

OPTIONALS: Long shaft.

CHECK MATERIAL AVAILABILITY

L43VR30

WELDER GLOVES

Protective welder model glove, and the hand in vachetta full grain leather, 8/10 thickness and wrist in groupon split leather. It has elastic adjustment on the back. Wrist finishing viés, with optional wrist sizes: 15 or 20 cm. It is indicated for hands protection in general services than present mechanical risks and where there is contact with abrasive materials and/or excoriating agents, against thermal agents (small flames, contact heat, convective, radiant and splash of molten metals) and against thermal agents from welding operations and similar processes.

L42VR30

COVER GLOVES

Protective cover model glove and the hand vachetta full grain leather, 8/10 thickness and wrist in groupon split leather. It has strap adjustment on the back. Wrist finishing viés. There are optional gloves sizes and/or colors according to the rubber insulating gloves. They are recommended for coverage of rubber insulating gloves, protecting them from mechanical risks, abrasive agents and/or excoriating agents.

OPTIONALS:

THEY ARE AVAILABLE IN COLORS ACCORDING TO THE RUBBER CLASS:

Class 00: Natural | **Class 0:** Red | **Class 1:** White/Natural

Class 2: Yellow | **Class 3:** Green | **Class 4:** Orange

Sizes according to insulating rubber glove class: 09 to 11.

L42II55

HIGH TEMPERATURE GLOVES

Protective high-temperature glove made of fireproofed leather, coated with polyester fiber. It has 25 cm coated wrist with cotton fabric. External stitching in aramida (heat resistant) and inner in cotton. Wrist finishing viés. It is indicated for the user's hands protection against abrasive and excoriating agents and against thermal agents (small flames, contact heat, convective, radiant and splash of molten metals).

gaiters

PS01

SYNTHETIC SAFETY GAITERS

Gaiter made in synthetic relax 1,8 mm. Double closure, zipper on the side of the shaft an buttoom pressure and buttoom of the barrel. Fixation to the foot through adjust-ment strep with buckle.

SIZES

M: Its circumference dimensions are defined with 42 cm at the top and 36 cm at the bottom, the total height of the barrel in 36 cm

G: Its circumference dimensions are defined with 46 cm at the top and 38 cm at the bottom, the total height of the barrel in 36 cm

PR01

LEATHER SAFETY GAITERS

Gaiter made in relax stamp leather with 15 to 17 think lines. Double closure, zipper on the side of the shaft an buttoom pressure and buttoom of the barrel. Fixation to the foot through adjust-ment strep with buckle.

SIZES

M: Its circumference dimensions are defined with 42 cm at the top and 36 cm at the bottom, the total height of the barrel in 36 cm

G: Its circumference dimensions are defined with 46 cm at the top and 38 cm at the bottom, the total height of the barrel in 36 cm

A great variety of

accessories

+ OPTIONS

Conforto has the perfect product to meet your need. Customize your footwear with the optionals below:

TOE CAPS

ARMOR THERMOFORMED TOE CAP

Toe cap made in polypropylene

PLASTIC TOE CAP

Forming toe cap made of injected polypropylene, with edge protector in EVA.

COMPOSITE TOE CAP

Protective toe cap made of injected polymer blend, with no metal components, impact resistant of 200 j and 1,500 kg of compression, with PVC edge protector.

STEEL TOE CAP

Protective toe cap, made of hardened steel anticorrosive electrostatic painting, impact resistant of 200 j and 1,500 kg of compression, with PVC edge protector.

TOE CAP PROTECTOR

Toe cap protector for industry safety. It is produced in vachetta full grain leather, relax stamp, and it has 40 mm elastic for the fixation / holding in the user's feet. There is inner coat (forro) in needled fabric with sweat absorption properties and antimicrobial.

For the toe fingers protection, it has steel toe cap with impact resistance of 200 J and 15 kN of compression. Fitted insoles in recourse fixed to the upper in the strobel system.

*This equipment is not considered PPE (personal protective equipment), therefore, it doesn't have CA (Certificate of Approval).

BIDENSITY PU MEN'S SOCIAL SHOES

Polyurethane (PU) soles, with inner 14mm heel, with energy absorption in the heel area, resistant for slippery places and fuel oil, with lower density midsole for impact absorption and distribution.

BIDENSITY PU WOME'S SOCIAL SHOES

Polyurethane (PU) soles, with inner 36mm heel, with energy absorption in the heel area, resistant for slippery places and fuel oil, with lower density midsole for impact absorption and distribution and polymeric steel shank to give structure and stability.

PU BIDENSITY REF. 829

Soles in polyurethane (PU) bidensity, wedge type, with two layers: a compact one, which provides more protection to chemical-physical agents and an expanded one, for absorption and distribution of impact when walking. There are scroll bar, pronation angle in the heelpiece and rotation system in the metatarsal region. It is slippery places and fuel oil resistant.

DUAL COLOR BIDENSITY PU WITH IMPACT ABSORBER

Soles in polyurethane (PU), wedge type, with two layers: a compact one, which provides more protection to chemical-physical agents and an expanded one, for absorption and distribution of impact when walking. Scroll bar, pronation angle in the heelpiece and rotation system in the metatarsal region. There is impact absorber (TPE) in the calcaneus area. It is slippery places and fuel oil resistant.

BIDENSITY PU REF. 419

Polyurethane (PU) soles, wedge type, with energy absorption in the heel area, resistant for slippery places and fuel oil, with lower density midsole for impact absorption and distribution.

NATURAL SBR RUBBER

SBR (Styrene butadiene rubber) rubber soles, with lower density midsole for impact absorption and distribution, resistance to contact with cold. It is identified by the ice logo.

SBR RUBBER

SBR Rubber soles, with lower density midsole for impact absorption and distribution, and resistance to contact with heat (300° for 60 sec). It is identified by the yellow logo.

NITRILE RUBBER

Sole in nitrile rubber (Nitrile Butadiene), with lower density midsole for impact absorption and distribution, resistance to the contact with heat (300° for 60 sec.), higher resistance to oil derivatives, grease, oils and some solvents. It is identified by the red logo.

PU BIDENSITY WITH HEEL REF. 831

Soles in polyurethane (PU), bidensity with heel 12mm, anti slip, with two layers: a compact one, which provides more protection to physicochemical agents, with more spaced grooves for liquid waste flows and better firmness when walking, and another layer, a expanded one, for impact absorption and distribution when walking. There are scroll bar, pronation angle in the heelpiece and rotation system in the metatarsal region. It is slippery places and fuel oil resistant.

BICOMPONENT PU/RUBBER SBR REF. 831

Bicomponent PU/ SBR rubber Ref Double-density sole with 12 mm heel, non-slip, with two layers: one in expanded polyurethane, soft, for absorbing and distributing impacts when walking. The another layer is compact, in SBR rubber (butadiene styrene), with resistance to contact with heat (300° per 60 sec.), identified by the yellow logo. Provides more protection against physical-chemical agents, with highlights more widely spaced for liquid waste drains and better firmness when walking. Scroll bar, angle of pronation in the heel and rotation system in the region of the metatarsals. Slip and oil resistant fuel. When in gray color, it is electrically insulating: resistant the passage of electric current in installations up to 500 V dry.

BICOMPONENT PU/NITRILE SBR REF. 831

Double-density sole with 12 mm heel, non-slip, with two layers: one in expanded polyurethane, soft, for absorption and distribution of impacts when walking. The other layer is compact, in nitrile rubber (butadiene nitrile), with resistance to contact with heat (300° for 60 seconds), greater resistance to derivatives of petroleum, greases, oils and some solvents, identified by the red logo. Provides more protection physical-chemical agents, with more spaced bumps for liquid waste drains and better firmness when walking. Scroll bar, pronation angle on heel and rotation system in the metatarsal region. Slip and fuel oil resistant. When in gray color, it is electrically insulating: resistant to passage of electric current in installations up to 500 V a dry.

ABSORBER

Made of thermoplastic elastomer (TPE) injected, is a component set below the fitted insole, in the calcaneus region, to absorb the impact at the moment of the footstep.

FITTED INSOLES

LEATHER /RECYCLED INSOLE
Insole made of leather, tanned vegetable, attached to the upper through strobil stitching

NONWOVEN INSOLE
Insole made of 100% polyester fibers, resin, attached to the upper through strobil sewing.

ZIPPER

ZIPPER

The accessory used for easy wear and adjust on the boots and combat boots models.

SAFETY INSOLES

STEEL INSOLE
Insole made of stainless steel, stamped and formed, with surface treatment.

ANTI-DRILLING INSOLE
Insole made of aramid fabric in layers of weft, which does not conduct electricity.

PROTECTOR METATARSAL

It is produced in polymer blend injected, this is a component attached to the top of the shoes (instep), in the metatarsals region, protecting this area from falling objects or hitting, with an impact resistance of 100 J External Metatarsal Protector

EXTERNAL METATARSAL PROTECTOR

EXTERNAL METATARSAL PROTECTOR COVERED

INNER METATARSAL PROTECTOR (BOOT MODEL BV54)

(CHECK THE AVAILABLE MODELS)

+ DURABILITY

Confort has accessories which extend your shoes life cycle. Check the items below:

COVER

It is produced in a resistant synthetic material, this is a component used overlaid the shoes in order to protect the shoes from materials that can spoil the upper.

CREAM

Especial wax to conserve and hydrate leather shoes. **WARNING:** this product is not indicated for nubuck and pull up ranges.

• **ATTENTION:** this product is not recommended for nubuck and pull up leather

WATERPROOFING

Water based and silicon dioxide spray that protects the nubuck leather, creating an invisible film which makes the appearance of stains, caused by water penetration, difficult.

REMOVABLE INSOLES

EVA INSOLES

Insoles produced of expanded material based on Ethylene Vinyl Acetate (EVA), with low density, dubbed with 100% polyester fabric with antimicrobial treatment.

CONFORMED EVA SHOES

Insoles produced of expanded material based on Ethylene Vinyl Acetate (EVA), with low density, dubbed with 100% polyester fabric with antimicrobial treatment, thermoformed in anatomical format providing greater comfort when walking.

SHAPED PU INSOLES

Insoles produced of low-density Polyurethane, dubbed with 100% polyester fabric with antimicrobial treatment, thermoformed in anatomical format providing greater comfort when walking.

INSOLE PU/POL INJECTED

Insoles produced of low-density Polyurethane, dubbed with 100% polyester fabric and with antimicrobial treatment, injected in anatomical format providing greater comfort when walking.

PU FOAM INSOLES

Insoles produced in low density PU, 2,5mm thickness, dubbed with Techonite fabric.

+ than safety,

proven comfort
